“Motion Processing in Early Deaf Adults”

Dr Fang Jiang, Ph.D.

Assistant Professor, Department of Psychology

University of Nevada, Reno

Tuesday August 28, 2018

Rhatigan Student Center, Room 264 (Spencer Room)

3:30–4:30 p.m.

Fang Jiang joined the Department of Psychology faculty at the University of Nevada, Reno in 2015. Her research examines relationship between brain structure and function/behaviors and the mechanisms underlying such relationship, with a particular emphasis on functional relevance of cross-modal responses consequent on sensory deprivation. She uses research methods including neuroimaging and behavioral measures.

She received her doctoral degree from the University of Texas at Dallas in 2007. After graduation, she received a postdoctoral fellowship award from the Human Frontier Science Program (2008-2011). In 2013, she was awarded the NIH Pathway to Independence (K99/R00) Award for her ongoing work investigating how cross-modal plasticity might be influenced by the normal functional specialization of a cortical region.
